ADP/ACP Testing: Testing Using Disaggregation

11/06/2026 10:37 pm CST

When the ADP/ACP test is run using disaggregation the software will provide three sets of results data - DisaggOver (statutorily non-excludable), DisaggUnder (statutorily excludable), and ExclNHCE. Before printing the test report you will need to select which testing combination to use - Two Tests or ExclNHCE. When the Two Tests option is selected the report will show both the test for the statutorily non-excludable group and the test for the statutorily excludable group. When the ExclNHCE option is selected the report will show one test that excludes only the NHCEs not meeting statutory eligibility.
